The College of Social Work has a number of faculty and doctoral students who are working in the general areas of health and behavioral health, and who have need for Big Data Infrastructure to establish or enhance their research initiative/programs.

Carrie Pettus-Davis, Stephen Tripodi, and Tanya Renn. The intersection of criminal justice populations and health/behavioral health. Studies require biopsychosocial data connected to epidemiological, intervention outcome and randomized controlled trial research.

Amy Ai and Michael Killian. The use of National Death Index and other government health, diseases and mortality data sets.

Melissa Radey, Dina Wilke, Lisa Schelbe, Jeff Lacasse and other faculty are interested in child welfare and child behavioral health data sets, as are our researchers in the Florida Institute for Child Welfare, headed by Jessica Pryce.

Karen Oehme of the Institute for Family Violence studies are moving into health analytics for large-scale public health intervention/education on FSU campus.

Yaacov Pescher is a research leader with the Florida Center for Reading Research and director of the Quantitative Methods Institute.

Dean Jim Clark chairs the Big Data Task Force.
